CC (IdEA) systems that comprises a fusion sequence that encodes for a CC circularly permutated, interaction-activated proteins that reassemble to CC form functionally reconstituted marker proteins which produce a CC detectable signal upon the association of two oligopeptides, or upon CC simultaneous association of two oligopeptides with a third oligopeptide. The marker protein is preferably a type A beta-lactamase, especially TEM-CC 1 beta-lactamase of Escherichia coli. The oligopeptide is a member of a CC protecome library selected from single chain antibody Fragment library, CC an antibody light chain variable region library and a peptide library, CC an antibody light chain variable region library and a peptide library, CC displayed within thioredoxin. The IdEA systems are useful for detecting CC extracellular proteins, particularly between two or three polypeptides. CC The systems are useful in selecting with a single marker protein the CC incorporation of multiple genetic traits in a host cell. In particular, CC dispnostics and prognostics, as well as in high-throughput screening CC systems for the discovery and validation of pharmaceutical targets and CC drugs. Prior systems or Selective Infective phage System, regular two-CC hybrid system or Selective Infective phage System, regular two-CC hybrid system or Selective Infective phage System, regular multiple steps between interaction and phenotype, which cause severe loss of efficiency CC due to high false positive and false negative rates. The present system or Selective phage System; regular transduction pathways, in high-throughput mapping of pair-wise protein-protein interactions within and CC cormat. The circularly permutated marker proteins comprising interaction-CC dependent enzymes find use in cell-based sensors for activation or inhibition of metabolic or signal transduction pathways, in high-throughput selection interactions within and in CC cormat. The present sequence is Bscherichia coli mature TEM-1 beta-lactamase enzyme from plasmid penalogene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 263;

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a fragment complementation system (I) CC which comprises a first oligopeptide (OP1) containing an N-terminal CC fragment with a C-terminal break point and a second oligopeptide (OP2) CC comprising a C-terminal with a N-terminal breakpoint, in which the C and CC N terminal fragments are both derived from a marker protein (MP) and CC reassemble to form a functionally reconstituted MP. Methods from the CC present invention are used for monitoring the occurrence of protein-CC protein interactions in a sample, identifying oligopeptide interactions consumunoglobulin (Ig) variable region, for identifying interactions between two different proteomes, identifying epitopes that bind to an CC immunoglobulin (Ig) variable region, for identifying interactions between an extracellular domain of a transmembrane protein and a polypeptide, for CC egulated signal transducers, forming a enzyme complementation system for selecting simultaneous incorporation of multiple genetic elements into a cCC compound in a host who is in need of it. The present sequence represents the Bscherichia coli mature TEM-1 beta-lactam derivative of an antitumour CCC exemplification of the Present incorporation of the Scherichia coli mature TEM-1 beta-lactamase, which is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁

15-MAR-2000; 2000US-00526106.
The invention describes a fragment complementation system (1) comprising a first oligopeptide having an N-terminal fragment with a C-terminal break-point, and a second oligopeptide having a C-terminal fragment with a N-terminal break-point, where the N-terminal fragment and the C-terminal break-point, where the N-terminal fragment and the C-terminal fragment each are derived from a marker protein and reassemble to form a functionally reconstituted marker protein (1) is useful for selecting simultaneous incorporation of multiple genetic elements into a host cell, and activating a beta-lactam derivative of an anti-tumour compound in a host. The method described is useful for identifying a second oligopeptide to which a first ollgopeptide binds, involving coexpressing the first and second oligopeptides. Binding of the first oligopeptide to the second oligopeptide results in the functional reassembly of the marker protein. The method is also useful for monitoring the occurrence of protein-protein interactions in a sample;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         fragment complementation system; marker protein; multiple genetic element incorporation; antibiotic resistance; beta-lactam derivative activation; anti-tumour compound; functional reassembly; protein-protein interaction; proteome interaction; immunoglobulin variable region; immune cell protein; CD40; phosphorylation-regulated cell signal transducer; TEM-1 beta-lactamase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pragment complementation system for detecting immunoglobulin epitope, has first oligopeptide containing N-terminal fragment with C-terminal breakpoint, second oligopeptide containing C-terminal fragment with N-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; SEQ ID NO 2; 47pp; English

(I) or an expression casette (II), encoding a selectable N or C-terminal peptide, is useful for identifying interactions between an extra cellular domain of a transmembrane protein and a polypeptide, where the transmembrane protein is an immune cell protein, preferably CD40. (I) or (II) is useful for high-throughput identification of compound that inhibit phosphorylation-regulated cell signal transducers. (I) efficiently detects multiple interaction between extracellular and intracellular protein with high throughput format. This is the amino acid sequence of antibiotic resistance enzyme TEM-1 beta-lactamase that can be used as a selectable gene in the fragment complementation system of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Escherichia coli beta-lactamase (AAW16634), including the signal peptide, is the expression product of a molecular chimaera, designated pCMV-BL (AAT66737), in which the beta-lactamase gene is under control of the CMV intermediate/early promoter. Vectors consisting of a transcriptional regulatory DNA sequence linked to a beta-lactamase gene can be used for enzyme prodrug therapy. Expression of the beta-lactamase in a targetted cell allows conversion of a prodrug into an agent toxic to the cell for treatment of cancer, viral (e.g. HIV) infection or inflammation.

Secretion of the enzyme has the advantage of increasing neighbouring cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The intracellular form (AAW18680) of TEM beta-lactamase is expressed by pCMV-delBL (AAT70311) in which a PCR-amplified beta-lactamase coding sequence, minus the signal sequence, is placed under control of the intermediate/early promoter of cytomegalovirus. Intracellular beta-lactamase constructs, placed under control of promoter/enhancer elements of lung-associated protein or neuroendocrine marker protein genes, can be used in novel chimaeric molecules for use in prodrug therapy of lung used in novel chimaeric molecules for use in prodrug therapy of lung

The constructs comprise exons 2-7 of human CYPIA1 gene under the constructs also contain an open reading frame in the opposite orientation to the cytochrome P450 exons. This ORF encodes ampicillin resistance. The constructs are suitable for transformation of human fibroblasts derived from the xeroderma pjgmentosum group A. Cultures of the transformed fibroblasts can be used to test substances for mutagenicity. The presence of the inducible cytochrome P450 gene allows metabolism of the substance to mutagenic metabolites. (Updated on 10-MAR-2003 to add missing OS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             pCMV-BL (AĀT29220), in which the beta-lactamase coding sequence is under the control of the intermediate/early cytomegalovirus promoter. Beta-lactamase delivery to mammalian cells confers sensitivity to cephalosporin prodrugs. Liposomal DNA/5-fluorouracil prodrug combinations resulted in s.c. tumour regression in mice bearing A549 tumours. Survival of mice bearing human large cell lung H460 intrathoracic (i.t.) tumours was increased upon i.t. injection of the secretory beta-lactamase DNA
                                                                                                                                                                                                                                                                                                                                   25-MAR-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is encoded by a chimeric mouse metallothionein-cytochrome P450IA1 (CYPIA1) expression construct. Two clones, pRNH127 and pRNH15, were isolated by different methods and which both had the same sequence. The CYPIA1 construct is used in assays to test for cytochroity of humans to a chemical. The method comprises exposing human fibroblast cells normally not including any cytochrome P450 activity to potentially toxic chemicals. The cells having been transformed to express cytochrome P450, under the control of a controllable promoter through the CYPIA1 gene, upon exposure to the chemical in vitro. The chemical is metabolised intracellularly into a cytochrome metabolite by oxidation within the fibroblasts through the intracellular cytochrome P450 mixed function oxidase enyzmes expressed by the cells. Gene damage in the test cells is detected as an indication of cytotoxicity of the chemical. (Updated on 25 -MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Escherichia coli beta-lactamase (AAW16635), lacking the signal peptide, is the expression product of a molecular chimaera, designated pCMV-delBL (AAT66738), in which the beta-lactamase gene is under control of the CMV intermediate/early promoter. Vectors consisting of a transcriptional regulatory DNA sequence linked to a beta-lactamase gene can be used for enzyme prodrug therapy. Intracellular expression of the beta-lactamase in a targetted cell allows conversion of a prodrug into an agent toxic to the cell for treatment of cancer, viral (e.g. HIV) infection or

Secretory beta-lactamase constructs, placed under control of promoter/enhancer elements of lung- associated protein or neuroendocrine marker protein genes, can be used in novel chimaeric molecules for use in prodrug therapy of lung cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA construct for gene-directed enzyme prodrug therapy of lung cancer comprises lung- or neuroendocrine-specific promoter controlling expression of prodrug-converting enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 286 AA;

                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel tetracycline assay that uses recombinant CC prokaryotic cells comprising a luciferase gene under the transcriptional CC control of a tetracycline repressor and tetracycline promoter and CC involves the detection of luminescence emitted form the cells. The assay CC can be used to distinguish tetracycline form other microbial agents. The CC invention also describes a novel plasmid comprising either the luxCDABB CC genes, a tetracycline repressor (TetR) and a tetracycline promoter (TetA) from Th10. The tetracycline promoter (TetA) from Th10. The tetracycline assay CC method can be used for the determination of the medicine. The method can be used for the determination of the medicine. The method can be used to test cheese production, as cheese making bacteria are not cable to work in the presence of tetracycline. The method can also be used for the descentration of antibiotics in foodstuffs, CC e.g. for allergic people. The present assay method does not rely on the growth of microbes as do conventional tests, and so is much more rapid. The present assay is also more sensitive, as even a small amount of luminescence can be detected

                                                                                                                                Ş
                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel method for the selection of monoclonal CC antibodies (MAb) which comprises (i) fusing B Jymphocytes with myeloma CC cells to produce antibody-producing hybridomas such that the antibodies CC are presented at the surface of the hybridomas by an antibody-binding CC invention also describes antibody-binding proteins (I); and (ii) binding the antibody to antigens (Ag). The CC invention also describes antibody-binding proteins (I) that comprise a CC combination of the signal peptide of a murine immunoglobulin (Ig) kappa: CC malecule; an antibody-binding site of proteins A, G, L or LG, and the CC transmembrane domain of popers (plattelet-derived growth factor receptor) CC or CD52. The method is used to select MAb with specificity for particular antigens. MAb can be selected without separate culture of hybridomas, and CC election can be made against many antigens in a library, optionally on CC the basis of strength of affinity for a particular antigen. Complex CC mixtures of hybridomas can be used for selection, reducing the time and CC cost involved in MAb selection. This sequence represents the bla protein CC protein contained in the expression vector pSEX15G2 which contains the CC bla protein, Neo-R and protein G described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                              This invention describes a novel method for the selection of monoclonal CC antibodies (MAb) which comprises (i) fusing B lymphocytes with myeloma CC cells to produce antibody-producing hybridomas by an antibody-bindies CC are presented at the surface of the hybridomas by an antibody-binding protein (I); and (ii) binding the antibody to antigens (Ag). The CC invention also describes antibody-binding proteins (I) that comprise a CC combination of the signal peptide of a murine immunoglobulin (Ig) kappa CC chain or a murine MHC (major histocompatibility complex) Class I k(k) CC molecule; an antibody-binding site of proteins A, G, L or LG, and the CC transmembrane domain of PDGFR (platelet-derived growth factor receptor) CC or CD52. The method is used to select MAb with specificity for particular CC antigens. MAb can be selected without separate culture of hybridomas, and CC selection can be made against many antigens in a library, optionally on CC the basis of strength of affinity for a particular antigen. Complex CC mixtures of hybridomas can be used for selection, reducing the time and CC cost involved in MAb selection. This sequence represents the Neo-R CC protein contained in the expression vector pSEXIII4 which contains the CC bla protein, Neo-R and protein G described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Selecting monoclonal antibodies, by expressing them on the surface hybridomas attached to antibody-binding protein, then reaction with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          11-JAN-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Expression vector; antibody binding protein; monoclonal antibody; Neo-R; B lymphocyte; myeloma cell; hybridoma; protein G; bla protein.

This invention describes a novel method for the selection of monoclonal CC antibodies (MAb) which comprises (i) fusing B lymphocytes with myeloma CC cells to produce antibody-producing hybridomas such that the antibodies CC are presented at the surface of the hybridomas by an antibody-binding CC protein (I); and (ii) binding the antibody to antigens (Ag). The CC invention also describes antibody-binding proteins (I) that comprise a CC combination of the signal peptide of a murine immunoglobulin (Ig) kappa CC chain or a murine MHC (major histocompatibility complex) Class I k(k) CC molecule; an antibody-binding site of proteins A, G, L or LG, and the CC transmembrane domain of PDGFR (platelet-derived growth factor receptor) CC or CD52. The method is used to select MAb with specificity for particular antigens. MAb can be selected without separate culture of hybridomas, and CC selection can be made against many antigens in a library, optionally on the basis of strength of affinity for a particular antigen. Complex CC mixtures of hybridomas can be used for selection, reducing the time and CC cost involved in MAb selection. This sequence represents the bla protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Selecting monoclonal antibodies, by expressing them on the surface of hybridomas attached to antibody-binding protein, then reaction with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-DEC-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11-JAN-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            11-JAN-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polynucleotide encoding a secretory polypeptide to facilitate the secretion of the expressed polysaccharase. The recombinant host cell is useful for producing polysaccharase which is useful for enzymatically degrading oligosaccharides such as lignocellulose, hemicallulose, cellulose, pectin or their combinations, and fermenting the product to ethanol, by simultaneous saccharification and fermentation processes. The present sequence is encoded by an integration vector which was introduced into cells to generate recombinant host cells. The vector contains a surrogate promoter from Zymomonas mobilis, the celZ gene from Erwinia chrysanthemi, resistance markers bla and tet, and Klebsiella oxytoca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 286 AA;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                seq length:
